

This year your generosity can make a direct impact on the life of a child with autism.

We've compiled a list of our biggest needs and wishes. With your support, we can fill those needs and ensure our students have the resources available to reach their fullest potential.

From communicating to social interactions, the technology we use to make our lives easier is also being used to make learning possible for a child with autism.

Assistive technology allows our teachers to address different learning styles - visual, auditory and kinesthetic. It gives them the ability to present things visually and provides ease in creating or altering activities to adapt to students' learning.

Your support enables each of our students to have the appropriate technology they need to best learn.

Visual Arts and Music not only presents a natural setting to develop fine motor and social skills, but also offers new opportunities to develop joint leisure skills, career exploration, regulation strategies, problem-solving and handling multi-step directions.

More importantly, our students love it! When you fill a need in the arts, you are helping our students use their imaginations to discover new worlds!

Children with autism often experience developmental delays making muscle strength, stability, coordination, and cardiovascular fitness areas of concern.

With your support, we can provide a wider range of activities to accommodate varying needs and capabilities of our students.

### \$50 and Under

Primacolor Art Stick - \$25	(Many needed)
Origami iPad Stand - \$30	(10 needed)
iPod Shuffles - \$50	(10 needed)
Board Games for a Class - \$25	(Many needed)
